TENTHS OF MILE

BARTLETT POND

Livermore Twp., Androscoggin County
U.S.G.S. Livermore Falls, Maine

Fishes

Brook trout
Rainbow smelt

Minnows
Golden shiner

Physical Characteristics

Area - 26 acres

Maximum depth - 26 feet

Temperatures:

Surface - 77⁰F

23 feet - 41⁰F

Principal fishery: Brook trout

Bartlett Pond was chemically reclaimed in 1959 to remove species that would compete with brook trout. Local sportsman constructed a barrier dam on the outlet and brook trout were introduced to provide a fishery. Regulations were promulgated to prevent the reintroduction of competing species and thus far only rainbow smelt and golden shiner have become reestablished.

Brook trout are stocked on an annual basis. Few trout survive past the first summer due to the high fishing pressure although anglers do report catching a few larger, older aged brook trout at ice out.

Surveyed - August, 1958

Revised - 1997
